

Safer Homes, Healthy Families

Safer Solutions provides the information we need to take action to make our homes safer and keep our families healthy.

Everyday, we are exposed to a mix of chemicals in the home, in the workplace and in our neighbourhoods. We know many of these are hazardous to our health and little is known about their combined effect. Children and people suffering respiratory and allergic disorders such as asthma are especially at risk.

The solution

We reduce our family's exposure to these chemicals if we use the information on the Safer Solutions website to change the way we clean and renovate our homes.

Here, you will find information on:

- common household chemicals and their health risks
- cleaning products we buy from the supermarket that could affect the health of our families
- making informed decisions about household cleaners
- safely managing insect pests in the home
- making schools and childcare centres safer for our children
- using safe renovating and gardening materials to improve our home.

Safer Solutions is an initiative of Total Environment Centre and is funded by the NSW Government through its Environmental Trust .
